

## RECYCLE YOUR OLD FLEXIBLE PVC WITH US!

Clearway's Flexible PVC Recycling Programme makes recycling PVC waste simple and rewarding. After making a purchase on our website, simply send your old PVC strip curtains to our warehouse, and we'll take care of the recycling for you. Your old flexible PVC will be reused to create new PVC products, helping to reduce waste and keep it from going into a landfill. Plus, we'll reward you a £25 voucher for partnering with us to minimise flexible PVC waste! Find out more on our website or by scanning the QR code below.

## CHILLER KIT INSTALLATION GUIDE

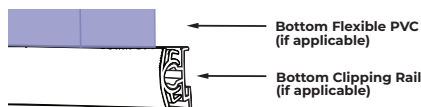

# 1 KIT COMPONENTS

Each kit contains a Rail Base Piece and an assembled Clipping Rail with PVC already clipped in. These pieces will fit together to form one complete rail system.

If you chose a bottom rail, you will also have the Base Piece and Clipping Rail for the complete bottom rail.

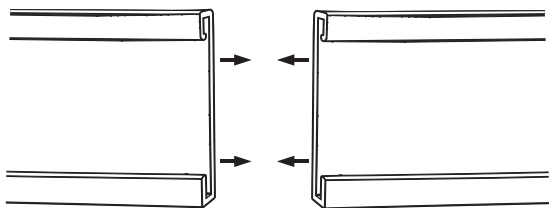

# 2 CLEAN THE FRIDGE

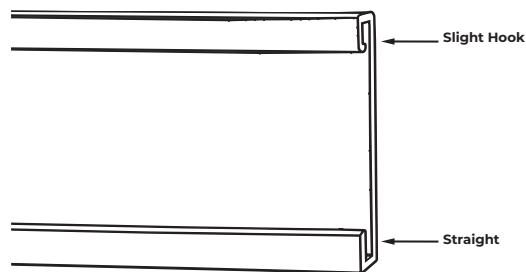

You will now need to attach the Rail Base Piece to the fridge. However, before you can do this, you will need to ensure that the area where you want to attach this piece to on the fridge is clean. Ensure to clean and remove all dust, grease and debris from the fridge to ensure that the adhesive double-sided tape on the rail base piece sticks to the fridge correctly.

# 3 INSTALL THE RAIL BASES

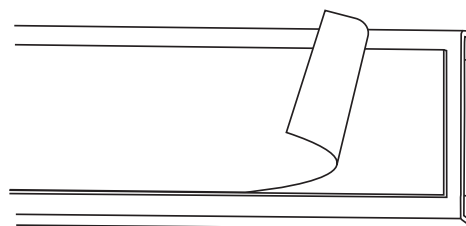

After ensuring the area on the fridge where you want to mount the rail is clean, you can then begin installing the Rail Base Piece. Ensure that the rail is the correct size for the fridge. If it is slightly longer, you can trim the rail with a hacksaw, sharp blade, or similar tool. If your fridge is large and requires more than one chiller kit, you will simply secure the rails next to each other on the fridge.

Also before installing the Rail Base Piece, please ensure that the hooked section of the Rail Base Piece is at the top, as seen in the image below. This is for the top and bottom rail if you have a bottom rail.

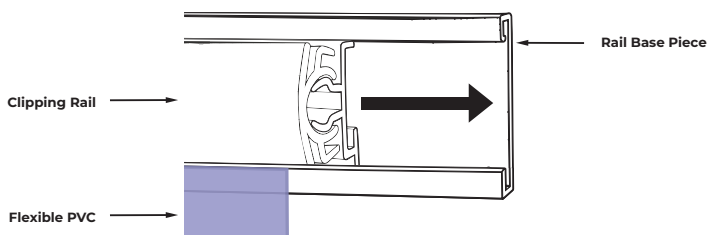

Once you are happy that the rails will fit correctly, we can begin attaching the Base Piece to the fridge. On the Rail Base Piece, simply remove the protective strip on the double-sided tape and stick the Rail Base Piece on to the fridge where required.

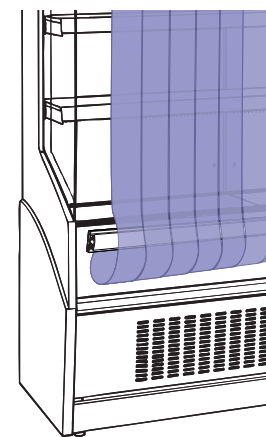

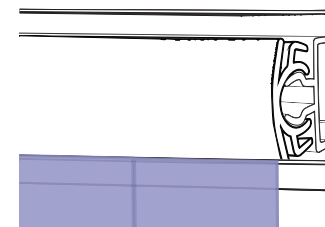

# 5 PUT THE FULL KIT TOGETHER

You will now need to assemble all the pieces of the full kit together. If the Rail Base Piece has been mounted on the fridge correctly, all you need to do is slide the Clipping Rail, into the Base Piece (as seen in the image below). Do this for the top rail and the bottom rail (if applicable).

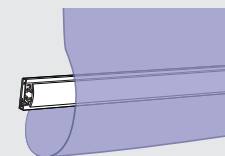

# 6 INSPECT THE INSTALLATION

Ensure that the Clipping Rail and the Base Rail fit together neatly as seen in the image below.

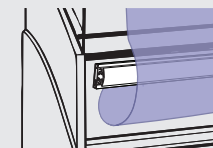

The strips should hang comfortably from the rail, and should still allow access through the strips. The strips will hang with some excess PVC at the bottom, as seen in the image below. Ensure that people are able to reach through the strips comfortably and without resistance. If they are not sitting in the fridge correctly, you may have to readjust the strips in the rail.

## ADDITIONAL INFO

If you ordered the sheet version of the chiller kit instead of the PVC strips version, the installation instructions will be exactly the same, except you will have a single sheet instead of multiple strips. Simply follow the same steps provided in this guide.

The bottom rail can be attached to a weighted bar or magnets, which can then be lifted like a blind. This allows users to lift the PVC in order to get in to the fridge.
